

Glasdon 'Garrison'

Battery Charging Housings

**Manchester
Airport**

Problem Identified

As part of an upgrade scheme Manchester Airport identified a need for two housings to accommodate electric vehicle battery charging equipment. A quick delivery and minimal site disturbance during installation were two of their key requirements.

The Solution

Mr Tony Brereton, Project Manager at Manchester Airport, contacted Glasdon and a site meeting was arranged with the Company's local Area Sales Manager to discuss the project in detail. Having looked at the wide choice of Glasdon products available for protecting industrial equipment, the Garrison housing range was found to satisfy all of Manchester Airport's requirements.

Resulting Benefits

The Garrison range has proved to be the ideal choice for Manchester Airport with many added benefits.

- A comprehensive choice of sizes and optional features allowed the Airport to specify housings which fully utilised the space allocated on site and comfortably accommodated all of the equipment.
- The housings were provided pre-assembled by Glasdon which saved time on site and kept disturbance to a minimum.
- The use of durable GRP (fibreglass) panels and high-quality ancillary components means that future maintenance costs will be negligible. Manchester Airport chose Garrison housings because, as with all Glasdon products, they are designed to offer the 'best value' for money over a long service life.
- The Garrison housings can be easily relocated if site circumstances ever change in the future.

WHAT THE CUSTOMER SAYS:

**Manchester
Airport**

Mr Tony Brereton, Project Manager at Manchester Airport, is very pleased with their choice of the Garrison range and had the following to say:

“Glasdon have provided us with the ideal solution to accommodate our battery charging equipment.

Built to our exact specification, the Garrison housings were delivered to a very urgent timescale and installed with the minimum of disruption. They have proved ideal for this application.

Should we ever have a future need for similar housings we would certainly use Glasdon and the Garrison system again.”
