

Case Study

HERMIT

Waste Materials Store

Problem Identified

Peterborough Audi were looking to improve facilities around their site. To meet current Health & Safety Regulations they needed to review some environmental working practices.

They identified a requirement for a secure shelter to safely store waste materials from vehicle service areas, which would eliminate the risk of contaminating general waste or the water supply.

The Solution

Mr Simon Holdich, Brand Manager at Peterborough Audi, contacted Glasdon for advice on a suitable product for their requirements.

The Hermit shelter range was selected as the ideal solution for this application. With a range of sixty different configurations, Peterborough Audi were able to specify a 5x3m shelter with the optimum layout for their site and the durable plastic-coated steel construction offered excellent long-term value for money with minimal maintenance.

Resulting Benefits

The Hermit shelter provides secure storage for 8 no. waste oil drums, 6 no. bins for used oil filters and a large stillage for old batteries. The shelter has a double door and is located adjacent to the service area for easy access.

Peterborough Audi are now able to show that they have a designated facility for the safe storage and disposal of waste materials.

WHAT THE CUSTOMER SAYS:

Mr Simon Holdich, Brand Manager at Peterborough Audi commented:

“The Glasdon Hermit Shelter has provided the ideal solution for our storage requirements.

Any waste material from the service area can now be stored securely which avoids any risk of contamination of other waste or the water supply.

We now have a facility that clearly indicates our commitment to safe environmental working practices.”
