# Litter and Cigarette Control at University of Glasgow - Faculty of Veterinary Medicine

## PROBLEM IDENTIFIED

The Faculty of Veterinary Medicine at the University of Glasgow is located in an area susceptible to very bad weather conditions. Open-topped, cast-iron litter containers and separate cigarette waste units were originally sited at building entrances and on walkways, but litter was blown out of the bins in high winds and they became water-logged following heavy rain. The cast-iron litter bins also needed regular maintenance and painting due to weather damage.

A corrosion and weather-resistant litter container was required to cut down on maintenance costs. A hooded container would also prevent the bins from becoming water-logged and litter being blown around the site.

## SOLUTION

James Macintyre, Grounds Manager at the University of Glasgow, chose the stylish, purpose-designed **INTEGRO™** Litter Bin complete with integral Ash Containers, to solve the problems being experienced by the University.

**INTEGRO** is manufactured from hard-wearing Durapol®\* material and incorporates an integral stainless steel stubber plate and grille. The high quality materials ensure that it is weather and corrosion-resistant, and so requires minimum maintenance. The hooded design also keeps litter in its place and protects the contents from rain. For quick and easy siting, the Bins were supplied with internal ballast to provide a secure container with no fixing requirements.

## RESULTING BENEFITS

University of Glasgow are very pleased with the **INTEGRO** as maintenance costs have been reduced and the combined litter/ash unit has improved the appearance of the entrance areas.

**INTEGRO's** tough, durable construction has even allowed bins to be sited in the worst weather areas of the University grounds, with the confidence that the bins will continue to provide years of service with minimum maintenance.

The highly visible graphics and the strong differentiation between the litter and ash sides have encouraged correct use, and the slim design is ideal for placement on walkways and at entrance areas.

### What The Customer Says:

*“We are very pleased with the choice of **INTEGRO**. The bins have provided us with single units for the disposal of both litter and ash. They were easily sited and have required minimum maintenance.*

*The **INTEGRO** units have stood up to the harshest weather conditions and we are sure that they will do so for many years to come. //*
