

Ground-Lock™ With Litter Bin Installation Instructions

For attaching a litter bin to the 'Ground Lock' Fixing System

WARNING: Check for buried services. During the installation please be safe. Where necessary sign and guard your works safely with reference to New Road & Streetworks Act 1991 Chapter 8 T.S.R. & G.D.

Note:- Ensure that all relevant personnel read the points listed below and that a copy is passed on to the staff involved with the installation.

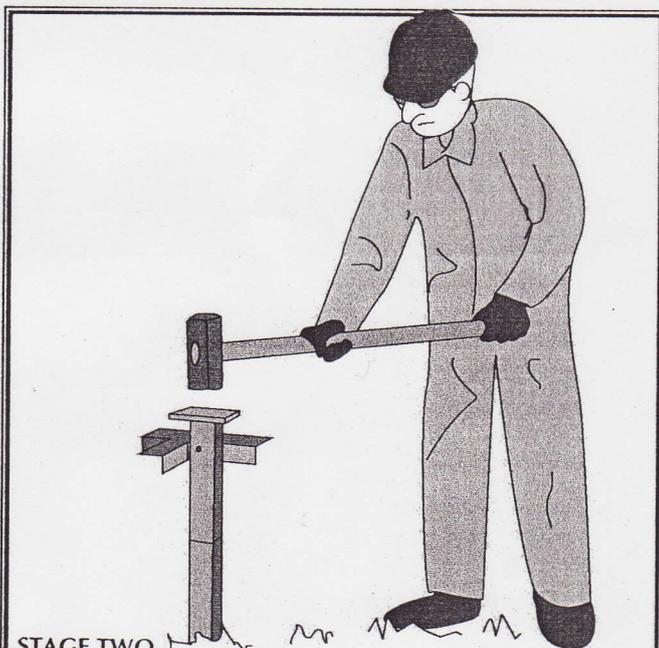

STAGE ONE

Before installation into the ground, the fixing bolts are to remain in their set position, this is to ensure that no earth is able to contaminate the threaded fixing points to secure the bin. They may be removed after the ground lock has been driven down to ground level. (Ref. stage two.)

NOTE: Ensure before proceeding with the installation that the matching holes in the bin and ground lock fixing points are in the correct position for your aperture orientation requirements. (Hooded bins only)

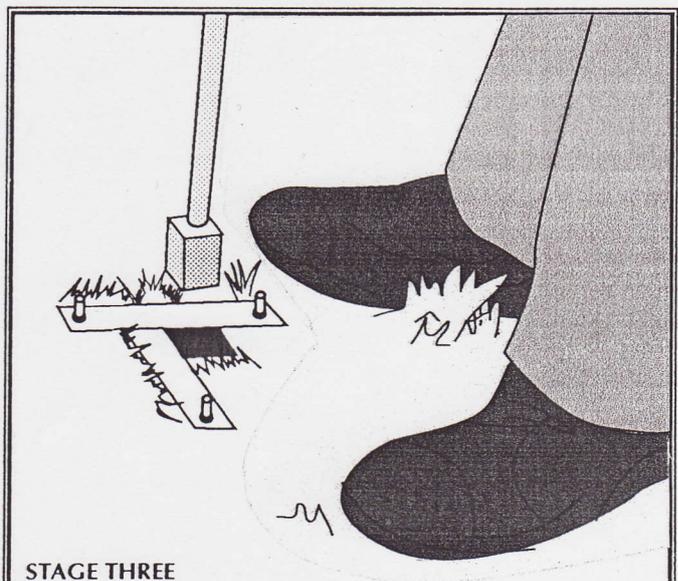

For existing Glasdon litter bins (see footnote) which are to be attached to the ground lock, a paper template is included to transfer the drill holes onto the bin base EXTERIOR FACE.

STAGE TWO

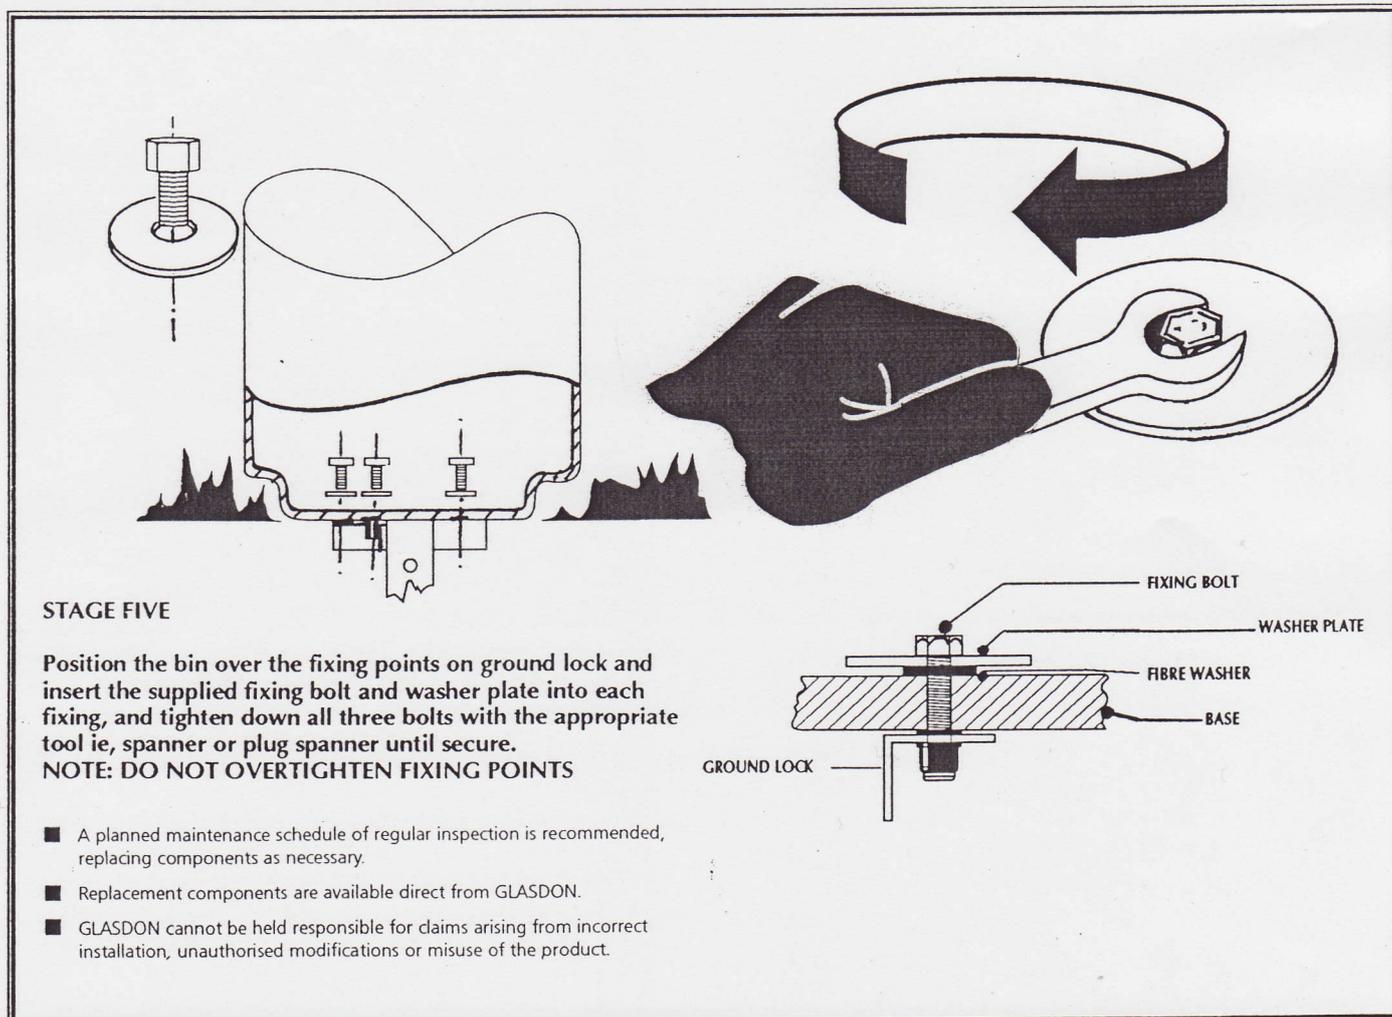

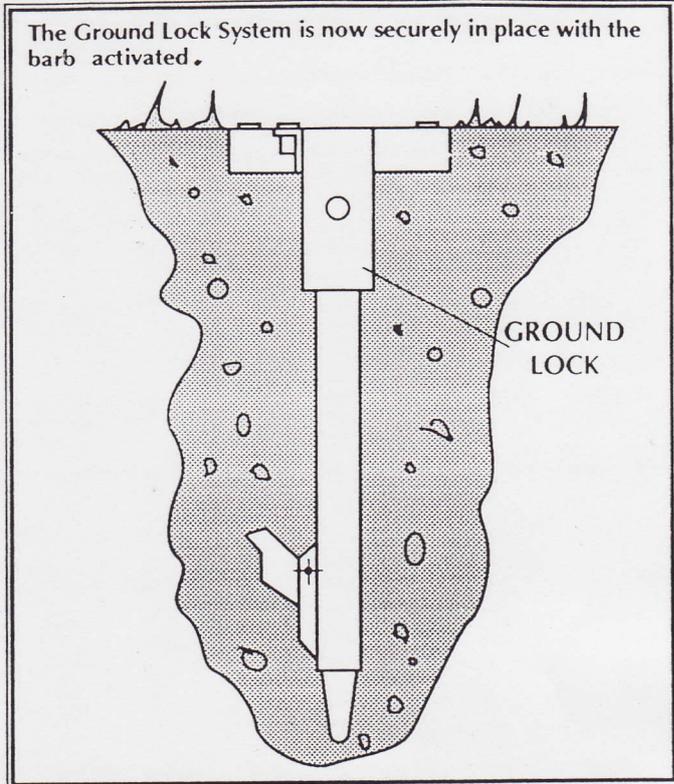

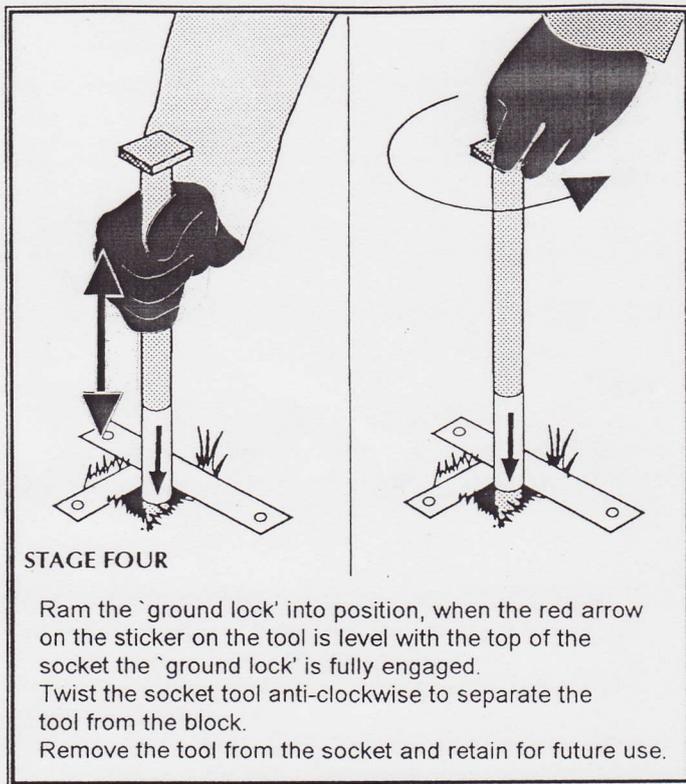

Push socket spike into the ground in a vertical position and insert installation cap into the socket.

NOTE: In hard ground conditions a two man operation may be required to achieve satisfactory installation.

STAGE THREE

Take the socket block and screw clockwise to the end of the special insertion tool provided, ensure block is screwed hand tight to the end of the thread. Then using the tool insert the block into the socket.
